

Duet™

Imazamox and Imazethapyr herbicide

Group 2

692 g (8 x 86.5 g)

Clearfield® Canola	2 to 6 leaf
Clearfield lentils	2 to 6 leaf
Clearfield sunflowers	2 to 8 leaf
Faba beans	1 to 6 leaf
Fenugreek	1 to 4 true leaf
Field Peas	1 to 6 true leaf
Seedling clover (seed production)	1 to 4 leaf
Soybeans	1 to 3 true leaf

Weeds Controlled Broadleaves

Chickweed
Cleavers
Cow Cockle
Flixweed
Hemp-nettle
Lamb's quarters
Redroot pigweed
Round-leaved mallow
Russian thistle
Shepherd's purse
Stinkweed
Volunteer canola
Wild Buckwheat
Wild mustard

Staging

Cotyledon to 4 leaf
(except where indicated)
(1 to 4 whorls)

Grasses

Barnyard grass	1 to 4 true leaf
Green foxtail	
Persian darnel	
Volunteer barley	
Volunteer spring wheat	
Volunteer tame oats	
Wild oats	

Application rates

Duet herbicide	17 g/ac (43 g/ha)
Adjuvant	Merge® surfactant 0.5% v/v or MSO Concentrate with Leci-Tech® 1.0% v/v

Water Volume

Ground application only 20-40 L/ac (5-10 gal/ac)

Mixing order

1. Use a 50 mesh (or coarser) filter screen and fill tank 3/4 full with correct amount of water. Start and continue agitation throughout mixing and spraying.
2. Add the required amount of Duet herbicide water-soluble bags directly into the sprayer through the tank opening and allow to dissolve completely.
3. Agitate for at least 10 minutes to dissolve the herbicide. If using a tank-mix, add the correct amount of second herbicide and continue agitating.
4. Continue Agitation while adding the required amount of MSO® or Merge® adjuvant. If excess foaming occurs, a silicone anti-foaming agent may be added.
5. Complete filling the tank to the desired level with water. If agitation is stopped for more than 5 minutes, re-suspend spray solution by full agitation prior to commencing spraying again.
6. Between loads of tank-mix, check in-line and nozzle screens and rinse clean if needed.

Application tips

Rainfastness – 3 hours.

Avoid application immediately before or after frost or during unseasonably cold weather.

Treat when weeds are actively growing.

Use higher water volume on dense weeds and thicker canopies.

Pre-harvest interval

60 days after application for Clearfield canola, field peas, fenugreek, faba beans and Clearfield lentils.

85 days after application for soybeans.

Follow crops

3 months after application:

Winter wheat as a rotational crop

1 year after application:

Canary seed

Canola (all types incl. Clearfield canola)

Chickpeas

Durum wheat

2 years after application:

Mustard (condiment type only)

Tank mixes

Please refer to herbicide label for approved tank mixes.
